

Coca-Cola freestyle | Downloading and Pairing

Download the App: myCoke is available for iOS and Android devices

1 Once you open the app, click on the equipment tab to begin.*

Pair to Freestyle Dispensers:

2 Phone screen:

You don't have any paired dispensers.

Once paired, dispensers from your outlets will be managed here.

+ Add a Freestyle Dispenser

In the Equipment tab, tap 'Add a Freestyle Dispenser' —or the 'Plus' symbol in the upper right corner.

* You do not need to sign in on the app homepage

3 Phone screen:

Choose a Display Name

This will be saved on the Freestyle dispenser and used to identify you and your device within the app.

RickJ

Already have a myCoke account? [Log in](#)

Enter a display name to identify yourself to other team-members.

4

The app will lead you through a series of interactions with the dispenser's dashboard.* Then the dispenser will display a QR Code.

* This will require a manager's passcode to access the dispenser's settings.

5 Phone screen:

Allow "myCoke" to use your location?
This allows you to pair with the dispensers in your outlet.

"myCoke" Would Like to Access the Camera
This allows you to use the scan functionality.

Don't Allow OK

Allow Once

Allow While Using App

Don't Allow

Allow camera access and location permissions.*

* Location permissions are initially required to identify your dispenser's location. After pairing, location permissions allow you to receive push notifications when you are close to your outlet. You can turn them off or on through the Settings on your phone.

6

Scan the QR Code on the dispenser to complete the pairing process.*

*After 3 minutes the QR Code will expire, and you will need to refresh the dispenser screen to create a new one.

Why are we syncing myCoke to Coca-Cola Freestyle (CCFS)?

We're listening to operators, and we know that accessing the dispenser's dashboard and checking cartridge levels can be a time-consuming interruption while drinks are being poured. With myCoke, crew members can stay updated from the convenience of their own phones without disrupting beverage service. The app will also help team members coordinate cleaning tasks. myCoke allows all connected users to see who has cleaned the dispenser, when they completed the task, and which cleaning routines are still outstanding.

Do crew members need a myCoke account to use the app?

No. Crew members simply click on the 'My Equipment' tab to begin monitoring activity with outlet dispensers. They will be required to enter a Display Name, which will be used as their ID as they interact with the app—and as they complete maintenance tasks.

How does the dispenser's QR Code work to pair app users?

Multiple crew members can scan the same QR code, all at once, to get up-and-running on myCoke—you do not generate a new QR code for each new user. However, the QR code only stays active for 3 minutes. If it expires, you will need to reinitiate the 'new user' process to get a new code. When a user scans one dispenser's QR code, they are paired to all CCFS dispensers in that outlet. They do not need to repeat the process for every dispenser.

Can I pair to more than one outlet?

Yes! You can pair with multiple outlets and toggle between outlets on the 'My Equipment' screen on the app.

How do myCoke's ingredient alerts work?

CCFS consumption data is continuously recorded via Cloud storage throughout normal operating hours, which allows myCoke to present a current status of ingredients, based on '% remaining' and 'time remaining.' (Keep in mind: A new Freestyle dispenser requires 3 weeks of usage-data before 'time remaining' can be accurately estimated and displayed.) The dispensers do not automatically gauge sweetener levels, so the app cannot provide '% remaining' estimates for HFCS and NNS. But it will send push notifications to crew members when those sweeteners become unavailable.

When using myCoke, what is the difference between alerts and push notifications?

Alerts are passive updates that the user will only see when they access the app's 'Equipment' tab—or a specific dispenser's 'Ingredient' tab. Alerts are very similar to the color-coded tiles that appear on the dispenser's dashboard. Push notifications will notify crew members of urgent concerns with a sound and an onscreen prompt, even if they are not currently viewing the myCoke app.

Will app users receive push notifications in their off-hours?

myCoke uses location services to filter push notifications and ensure that crew members only receive them when they are in close proximity to their outlet. That way they are not receiving notifications while they are away. When a crew member first returns to an outlet, they only receive notifications that are outstanding, as of the moment they walk in.

How do I unpair a dispenser or a user from the app?

1) To unpair a dispenser from the app, navigate to the dispenser's 'About' screen. Click on 'Unpair,' at the bottom of the screen.

2) To unpair a user from the app, access the dashboard on an outlet dispenser and click on 'Settings,' then 'App'. Next to the listing for 'myCoke App' click on 'Details.' A list of users will appear. Find the user and click 'Delete' to unpair the user from all dispensers under the outlet.
