

Memo: Maintaining Coca-Cola Freestyle Dispensers During Business Closures

In today's environment, we understand that business needs are changing rapidly in the food service environment, and that you may need to close all or parts of your outlet. To help you maintain your Coca-Cola Freestyle dispensers, the following updated procedures are recommended. We will continue to evaluate and develop recommendations as the situation evolves and we learn more. We appreciate your continued partnership and business!

Outlet closes for an extended period (72 hours+)

1. Prior to closure, follow the daily cleaning guidelines for your Coca-Cola Freestyle dispenser(s) as outlined in the user guide for each dispenser. User guide links are referenced below and can also be found at <https://ilearncoca-colafreestyle.com/>.
 - a. Pay close attention to cleaning exterior surfaces such as:
 - i. Touchscreen & Pour Button
 - ii. Nozzle & Injector Ring
 - iii. Ice Lever
 - iv. Pour Lever (7000 & 7100 only)
 - v. Sides, Top, and Front of the dispenser(s)
 - b. Pour bucket of warm sanitizer solution slowly down the drain of the dispenser(s) as referenced in the user guides.
2. The following procedures should be performed to help maintain your Coca-Cola Freestyle dispenser(s) during an outlet closure of 72 hours or more, and no crew members will be on-site.
 - a. Remove nozzle tip from the dispenser(s) clean and sanitize. Then clean and sanitize the nozzle injector ring on the dispenser(s).
 - b. Turn off the CO2 source. For the 9100, 9000, and 8000 series dispensers, the CO2 valve is at the lower left of the dispenser in the bottom cabinet. For the 7000, 7100, and Flex turn off the CO2 in the back room at the regulator.
 - c. Leave ingredient cartridges in the dispenser and BIB's connected.
 - d. Power off the dispenser using the green power button and unplug from the wall outlet (if possible). Reference the dispenser user guides to review where the power button is for each dispenser.
 - e. Unplug ice maker from outlet (if applicable)
 - f. Unplug external carbonator from outlet (Flex only)
 - g. Unplug the water booster from the wall outlet in the backroom (if applicable)
 - h. Shut off water supply to the dispenser.
Important Note: This is the last step. Do not depressurize the system before shutting off water. Pressure should be maintained in the water lines and any potential disconnections should be avoided.

Assistance:

Should you need assistance completing any or all of these tasks, please call the MyCokeTech support line at 1-800-241-COKE (2653) and ask to speak with a Senior Technical Advisor. Senior Technical Advisors are available 24/7/365, and are ready to help!

Potential Delays:

These recommendations are intended to help minimize the time it takes to make the dispenser operational again if your location is closing for an extended period or your dispenser is not being used for an extended period. If circumstances prevent you from following the recommended protocols, it could result in additional time to bring your dispenser back on-line after an extended shut down. Thank you for your partnership as we work through these evolving times together.
